HOW TO MAKE SURE YOUR WHEELIE BIN GETS EMPTIED:

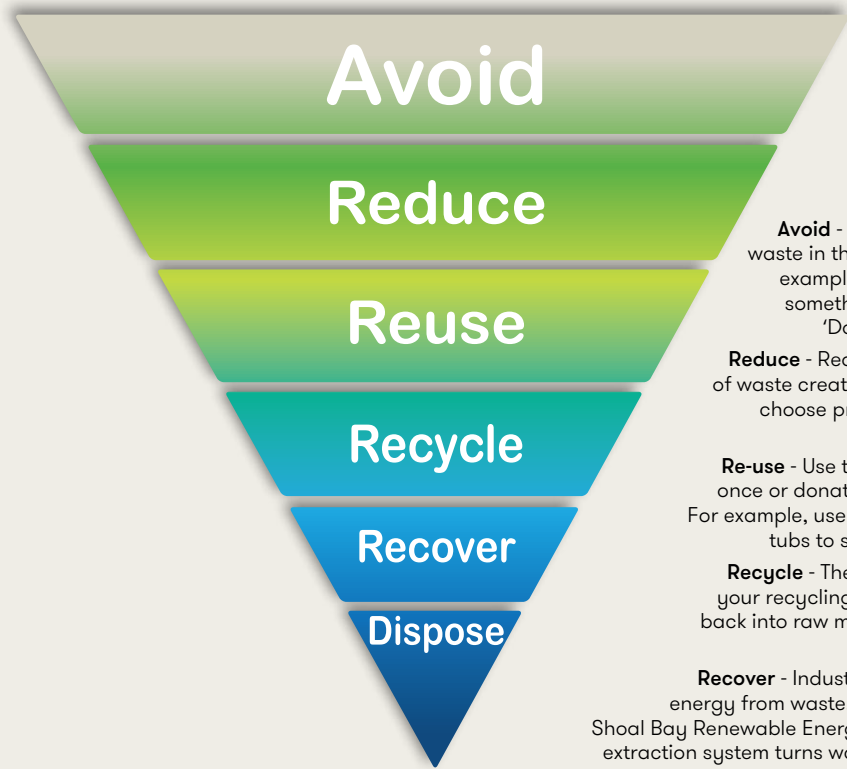

- Place bins at least 1/2 metre apart on kerbside (not the road).
- Place bins out by **7am**.
- Take your wheelie bin in within **24 hours**.
- Keep bins clear of overhanging branches and obstructions.
- No overflowing bins.
- Close the bin lid.
- Bin must not exceed **70kg**.
- Only recyclable items go in the yellow lid bin.
- Council bins only.

How to report a lost or stolen or damaged wheelie bin. Phone JJ Richards on 1800 290 581 or report through City of Darwin's Click and Fix App.

How to avoid flies. Our website has tips on what you can do darwin.nt.gov.au

Avoid - Avoid producing waste in the first place. For example, before buying something ask yourself 'Do I really need it.'

Reduce - Reduce the amount of waste created. For example, choose products with less packaging.

Re-use - Use things more than once or donate to an op-shop. For example, use clean ice-cream tubs to store loose items.

Recycle - The items placed in your recycling bins are turned back into raw materials to make new products.

Recover - Industry can generate energy from waste. For example, at Shoal Bay Renewable Energy Facility a gas extraction system turns waste into energy.

Dispose - As a last resort, dispose of waste in landfill.

THE WASTE HIERARCHY

- The waste hierarchy is a universally accepted guide on how to prioritise how we use, reuse and dispose of material for the best environmental outcome for now and the future.
- The higher up the hierarchy you act, the better for the environment.

PRE-CYCLONE CLEAN-UP

City of Darwin collect hard rubbish items from Darwin residents' nature strips. Council encourages residents to put out unwanted items which may become hazardous in the event of a cyclone.

SHOAL BAY RENEWABLE ENERGY FACILITY

This facility is owned and operated by Landfill Management Services (LMS) in cooperation with City of Darwin. Opening in 2005, this facility generates 9,000 megawatt hours of renewable electricity per year which is enough to power 1,800 homes. This is a reduction of approximately 38,000 tons of greenhouse gas emissions (CO₂) a year. The mitigation of greenhouse emissions is an important step in ensuring the disposal of Darwin's waste has the lowest possible impact on the environment.
